BUSINESS VISION & PERSONAL GOALS

Graphic design studio · one-year plan, November 2026 – November 2027

1. THE BUSINESS

1-year revenue goal	$90,000 gross (≈ $7,500 per month, built from recurring client income)
Desired monthly income	$7,500 per month, ≈ $90,000 per year — taken as income, not left in the business
Ideal number of clients	10–12 clients on recurring retainers — residual income whether or not a project starts
Preferred project types	Creative, interactive websites — each with an admin area and an AI assistant that helps run the site and keeps improving it
Desired work schedule	4-day week, ~30 hours — the fifth day is for the portfolio, the product, and the forge

2. PERSONAL GOALS

Definition of success

- Financial independence early — the studio pays $7,500 a month, every cost and every tax bill, on a 30-hour, four-day week, with room left to save.
- Several well-selling apps and a couple of other businesses — real estate among them — so income never rests on one client list or one good year.
- Full creative control — interactive work with an assistant built in, no client I have to talk myself into, and my name on nothing I would not show.
- One life, so no borrowed scoreboard: success gets measured against this page, never against someone else's timeline.

Financial goals

Home	Yes — $500,000–$750,000, inside 2–3 years (by 2029) in my current metro. 20% down is $100,000–$150,000, or $50,000–$75,000 each on two incomes. Check live Redfin / Zillow listings before fixing the number.
Family	Spouse / partner; no children or pets budgeted here. If that changes, the revenue goal moves with it — the numbers don't lie.
Passive wealth	Digital products built from studio work — templates, then a course, then the apps — plus crypto, and equity in property once the first one is bought. Crypto is the volatile half: cap it and keep the rest boring.
Retirement	Age 60, $1,500,000. A 4% withdrawal is ≈ $60,000 a year in today's money, before any product income keeps trickling in.

Travel — 2 weeks each, mid-range

Destination	Per person	Built from
Japan & East Asia	$5,000	airfare + ~$210/day
Southeast Asia	$3,800	$1,800–3,500 land + air
Latin America	$2,400	airfare + $70–90/day
Oceania (Australia / NZ)	$6,000	airfare + $250–300/day
Four trips, two weeks each	**≈ $17,200**	≈ $34,400 for two

Projects to invest in

- **Blacksmithing / metalwork —** the hands-on counterweight to a screen job. Forge, anvil and consumables are a one-time kit, then a weekend habit that pays in knives and gifts rather than invoices.
- **Photography & video gear —** buys itself back: my own shots of finished client work close the next job better than any mockup, and it is the one hobby that is also a business asset.
- **Build a product or app —** the closest thing to a second income stream and the seed of the digital-product line: templates first, then a course, then something that sells while I sleep.
